Keep Athletes In The Game

SPORT PHYSIOTHERAPY

ON FIELD MANAGEMENT

Prevent Injury
Optimize Performance

Assessment • Immediate Care • Rehabilitation • Return to Sport •

FOR PHYSIOTHERAPISTS | SPORTS MEDICINE TEAM | ATHLETES

KEY AREAS

- ✓ Injury Assessment
- ✓ Acute Injury Management
- ✓ Taping & Bracing
- ✓ Load Management
- ✓ Return to Play Protocols
- ✓ Sports-Specific Rehabilitation
- ✓ Injury Prevention
- ✓ Field Emergency Care

On Field Support Matters

Prepared for the Game

COMMON SPORTS INJURIES

- ✓ Ankle Sprain
- ✓ Knee Injury (ACL, Meniscus)
- ✓ Hamstring Strain
- ✓ Muscle Contusion
- ✓ Shoulder Injury
- ✓ Groin Strain
- ✓ Stress Fracture

Assess Treat Return

HIGH-YIELD BPT STUDY GUIDE & EXAM COMPANION

Sport Physiotherapy on field Management

Author: Dr. MD Kamran Alam | Instagram: @restore_healthphysio

OFFICIAL DIGITAL STUDY GUIDE VERIFICATION

Format: High-Yield Digital PDF | Standard Price: Rs. 99

Authorized License: Personal Single-User Academic License

STUDY GUIDE DETAILS & CONTENTS:

Comprehensive high-yield notes designed for Bachelor of Physiotherapy (BPT), MBBS, BDS, and allied healthcare students. Covers fundamental anatomy, clinical assessments, pathological conditions, evidence-based physical therapy rehabilitation protocols, and exam-oriented high-yield review.

KEY HIGHLIGHTS:

- Exam-Focused: Concise points curated from leading medical textbooks and clinical references.
- Visual Diagrams: High-yield diagrams and tables for quick revision.
- Mobile & Tablet Optimized: Readable on phones, tablets, iPads, and laptops.
- Official Medicos Minds Release: Verified by Dr. MD Kamran Alam.

Stronger Muscles Better Movement

TOPIC - 5
MUSCLE INJURIES
- GRADING & MANAGEMENT -
(Strain • Tear • Contusion • Rupture)

Recover Rehabilitate Return to Performance

1. INTRODUCTION

- Muscle injuries are common in sports, physical activities and daily life.
- They occur due to excessive load, overuse, trauma or poor conditioning.
- Can range from mild strain to complete rupture.
- Early recognition and proper management prevent complications and allow safe return to activity.

"Muscle damage + rest + rehab = Stronger again!"

2. TYPES OF MUSCLE INJURIES

- **Strain** – overstretching or partial tear of muscle fibres.
- **Tear** – partial or complete rupture of muscle fibres.
- **Contusion** – blunt trauma causing muscle bruising.
- **Rupture** – complete tear (rare).

3. GRADING OF MUSCLE INJURIES

Grade	Injury	Features	Recovery Time
I (Mild)	Strain (1–10% fibre tear)	• Mild pain • Minimal loss of strength • No significant swelling	1–2 weeks
II (Moderate)	Partial tear (10–50% fibre tear)	• Moderate pain • Swelling & tenderness • Loss of strength • Some functional loss	2–6 weeks
III (Severe)	Complete tear (>50–100% fibre tear)	• Severe pain • Marked swelling • No active contraction • Functional loss	6–12+ weeks (± surgery)

Muscle Injury Grading (Visual)

4. MANAGEMENT

1. Acute Phase (0–72 hrs)

- **R** Rest – stop activity, protect muscle.
- **I** Ice – 15–20 min, every 2–3 hrs.
- **C** Compression – elastic bandage.
- **E** Elevation – reduce swelling.

Goal: Reduce pain, swelling & prevent further damage.

2. Rehabilitation Phase (1–6 weekss)

- Gentle ROM (pain free).
- Isometring & flexibility.
- Avoid stretching [illegible] specific drills.
- Neuromuscular training & proprioception.

Goal: Restore strength, flexibility, balance and function.

5. SPECIFIC MANAGEMENT BY TYPE

Strain
- RICE, analgesics.
- Gradual rehab.
- Return when pain free & full ROM.

Tear
- Grade I–II → conservative.
- Grade III → surgical (if large).
- Rehab with progressive loading.

Contusion
- RICE, analgesics.
- Monitor for hematoma/compartment syndrome (rare).
- Gradual return to activity.

Rupture
- Surgical repair (usually).
- Immobilization (initial).
- Intensive rehab (longer duration).

6. KEY POINTS

- ✓ Grade I–II → conservative, Grade III → surgical (often).
- ✓ Early RICE is essential.
- ✓ Progressive rehab is the key to full recovery.
- ✓ Return to sport only when: pain free + full ROM + strength ≥ 90%.
- ✓ Prevent with proper warm-up, stretching, conditioning and technique.

7. COMPLICATIONS (IF NOT PROPERLY MANAGED)

- ✗ Chronic pain and weakness.
- ✗ Recurrent injury.
- ✗ Myositis ossificans (rare).
- ✗ Loss of muscle function / atrophy.

"Heal Train Perform Better"

Injury is not the end...

STRONGER TODAY ♥ SAFER TOMORROW

@restore_healthphysio

It's part of the comeback

THANK YOU FOR YOUR PURCHASE!

We wish you the very best in your medical and physiotherapy examinations.
