• THE SCIENCE OF MOVEMENT •

PHYSIOTHERAPY

IN ORTHOPAEDICS CONDITION

Assessment • Treatment • Rehabilitation

Restore Function. Reduce Pain. Improve Quality of Life.

WHAT IS IT?

Physiotherapy in orthopaedic conditions focuses on restoring **movement, reducing pain, improving strength** and function in musculoskeletal disorders and post-injury/ post-surgical conditions.

- PAIN RELIEF
- IMPROVED FUNCTION
- STRENGTH & MOBILITY
- BETTER POSTURE
- FASTER RECOVERY

Movement is Medicine

KEY TOPICS COVERED

1. Basic Concepts & Principles of Physiotherapy
2. Common Orthopaedic Conditions (e.g. Fractures, OA, RA, etc.)
3. Assessment & Examination (Subjective & Objective)
4. Goal Setting & Treatment Planning
5. Manual Therapy & Mobilization
6. Therapeutic Exercises
7. Modalities (Heat, Cold, US, TENS, IFC, etc.)
8. Post-Operative Rehabilitation
9. Assistive Devices & Orthoses
10. Patient Education & Home Program

Better Movement Better Life

COMMON ORTHOPAEDIC CONDITIONS

FRACTURES | OA | RA | SPINE DISORDERS | SPORTS INJURIES | POST-SURGICAL REHAB

FOR ALL MEDICAL STUDENTS

MBBS | BHMS | BDS | BSC. NURSING | BPT

Small Steps... Big Recovery

HIGH-YIELD BPT STUDY GUIDE & EXAM COMPANION

PT in Orthopaedic conditions

Author: Dr. MD Kamran Alam | Instagram: @restore_healthphysio

OFFICIAL DIGITAL STUDY GUIDE VERIFICATION

Format: High-Yield Digital PDF | Standard Price: Rs. 99

Authorized License: Personal Single-User Academic License

STUDY GUIDE DETAILS & CONTENTS:

Comprehensive high-yield notes designed for Bachelor of Physiotherapy (BPT), MBBS, BDS, and allied healthcare students. Covers fundamental anatomy, clinical assessments, pathological conditions, evidence-based physical therapy rehabilitation protocols, and exam-oriented high-yield review.

KEY HIGHLIGHTS:

- Exam-Focused: Concise points curated from leading medical textbooks and clinical references.
- Visual Diagrams: High-yield diagrams and tables for quick revision.
- Mobile & Tablet Optimized: Readable on phones, tablets, iPads, and laptops.
- Official Medicos Minds Release: Verified by Dr. MD Kamran Alam.

PHYSIOTHERAPY IN ORTHOPEDIC CONDITIONS

Move Better Live Stronger

1. PT assessment for Orthopaedic conditions – SOAP format.
2. **Traumatology :** Physiotherapy assessment in fracture cases (Upper limb, Lower Limb and spine).
3. Principles of PT management in fracture cases –
4. Guidelines for treatment during immobilization and after immobilization period.
5. PT management in complications (early and late).
6. **Congenital disorders or Deformities,**
7. Congenital Torticollis,
8. Cervical rib,
9. Sprengels shoulder,
10. Coxavara & valga,
11. CTEV,
12. Pes Planus, Pescavus,

Acquired Deformities :

13. Scoliosis, Kyphosis, Lordosis,
14. Genu valgum, Genu varum and Recurvatum,
15. Physiotherapy management for Soft Tissue injuries and inflammatory condition of upper and lower limb.
16. **Amputation** – level of amputation of upper limb and lower limb, PT assessment,
17. stump care, stump bandaging,
18. pre and post prosthetic management including check out of prosthesis,
19. training,
20. Arthrodesis,
21. Osteotomy, Tendon transplantation,
22. Soft tissue release – tenotomy, myotomy, lengthening.
23. Bone grafting. Arthroplasty – partial and total, External fixators.
24. Synovectomy. **Leprosy :** (aims and management after surgical procedures,)
25. **Poliomyelitis** – Common deformities, Clinical Features, PT assessment, aims and management after surgical corrections and reconstructive surgeries.
26. **Infective conditions –**
27. Osteomyelitis – acute and chronic, Septic arthritis, Pyogenic arthritis,
28. TB spine and major joints (knee and hip),
29. Rheumatic Arthritis Osteoarthritis – emphasis on hip, knee and hand.
30. Ankylosing spondylitis, Periarthriticshoulder, Gout, Perthes disease, Spinal Conditions –
31. Cervical and lumbar spondylosis, Spondylitis, Spondylolisthesis,
32. Spinal canal Stenosis Spinal postural abnormalities,
33. SI joint dysfunction,
34. Sacralisation,
35. Lumbarisation Intervertebral disc prolapsed,
36. Coccydynia, Spina bifida.
37. Treatment guidelines for soft tissue injuries – acute, sub-acute and chronic stages, Repair of soft tissues – rupture of muscle, tendon and ligamentous tear.

Stronger Bones Healthier Lives

Better Movement Better Life

Topic 13

SCOLIOSIS, KYPHOSIS, LORDOSIS

Abnormal Curvatures of the Spine

Same Spine Different Curves Different Problems

Know it for Better Care

SCOLIOSIS

What is it?

- Lateral (sideways) curvature of the spine, often with rotation of vertebrae.

Scoliosis (lateral curve)

Types

- Idiopathic (most common)
- Congenital
- Neuromuscular
- Degenerative
- Traumatic

Clinical Features

- Uneven shoulders
- Rib hump (Adam's forward bend test)
- Waist asymmetry
- Back pain (sometimes)
- Reduced trunk flexibility

Diagnosis

- Adams forward bend test
- X-ray (Cobb angle > 10° = scoliosis)
- MRI (if neurological signs/suspected underlying cause)

Management

- Observation (mild, not progressive)
- Bracing (growing child)
- Physiotherapy (postural training, core strengthening)
- Surgery (severe/progressive)

KYPHOSIS

What is it?

- Exaggerated posterior curvature of thoracic spine (hunchback).

Kyphosis (increased thoracic curve)

Types

- Postural
- Scheuermann's disease
- Osteoporotic
- Congenital
- Infective (e.g., TB)

Clinical Features

- Rounded upper back
- Forward head (sometimes)
- Back pain
- Reduced chest expansion
- In severe cases – respiratory compromise

Diagnosis

- Clinical exam (sagittal profile)
- X-ray (increased thoracic kyphosis)
- MRI/CT (if neurological signs / suspected cause)

Management

- Postural training
- Extension exercises
- Bracing (Scheuermann's)
- Treat underlying cause
- Surgery (severe/structural)

LORDOSIS

What is it?

- Exaggerated inward curvature of lumbar spine (often with anterior pelvic tilt).

Lordosis (increased lumbar curve)

Types

- Postural
- Pregnancy
- Obesity
- Congenital
- Neurological (e.g., cerebral palsy)

Clinical Features

- Increased lumbar curve
- Prominent buttocks
- Anterior pelvic tilt
- Back pain
- May cause hip & knee joint stress

Diagnosis

- Clinical exam (lumber curve)
- X-ray (sagittal view)
- Rule out other causes

Management

- Core strengthening
- Stretching (hip flexors)
- Posture correction
- Treat underlying cause
- Bracing (selected cases)

KEY DIFFERENCES

Feature	Scoliosis	Kyphosis	Lordosis
Plane	Lateral (sideways)	Sagittal (posterior)	Sagittal (anterior)
Location	Any part (mostly thoracic)	Thoracic	Lumbar (mostly)
Appearance	Side bend + rotation	Hunched back	Increased inward curve + anterior tilt
Common age	Adolescents	Adolescents / older adults	Varies (young/ adults)
Associated with	Idiopathic, congenital, neuromuscular	Scheuermann's, osteoporosis, TB	Obesity, pregnancy, neurological
Radiology	Cobb angle	Increased thoracic kyphosis angle	Increased lumbar lordosis angle

Remember: Scoliosis = Side bend | Kyphosis = Hunchback | Lordosis = Inward curve

QUICK POINTS

- ✓ Scoliosis is the only one with lateral curvature.
- ✓ Kyphosis = rounded back (posterior curve).
- ✓ Lordosis = swayed back (anterior curve).
- ✓ Use Adams test for scoliosis.
- ✓ Scheuermann's = structural kyphosis (adolescent).
- ✓ Osteoporosis = common cause of compression fractures → kyphosis.
- ✓ Pregnancy & obesity → common cause of lordosis.
- ✓ Neurological conditions can also cause lordosis/kyphosis.

Good Posture = Better Life

Study Today... Help Tomorrow

— MEDICAL STUDENT —

Spine is the pillar of your body

THANK YOU FOR YOUR PURCHASE!

We wish you the very best in your medical and physiotherapy examinations.
