Movement Heals Better

MEDICOS MINDS

LEARN PRACTICE EXCEL

EXERCISE THERAPY

THE COMPLETE STUDY GUIDE

FOR MBBS | BHMS | B.Sc. NURSING | BDS | BPT

KEY AREAS

- ✓ Principles of Exercise Therapy
- ✓ Types & Components
- ✓ Assessment & Evaluation
- ✓ Therapeutic Exercise
- ✓ Strengthening Exercises
- ✓ Stretching & Flexibility
- ✓ Aerobic Conditioning
- ✓ Postural Training
- ✓ Proprioception & Balance
- ✓ Functional Training
- ✓ Exercise in Special Conditions

WHY THIS BOOK?

- High-Yield Points
- Concept Clarity
- Diagrams & Flowcharts
- Previous Year Exam Focus
- Easy to Revise

Stronger Movement Better Life

MUSCULOSKELETAL CONDITIONS | NEUROLOGICAL CONDITIONS | CARDIOPULMONARY CONDITIONS | GERIATRIC CONDITIONS | POST-OPERATIVE REHABILITATION | SPORTS & INJURY REHABILITATION

Evidence Based Practice for Better Outcomes

@restore_healthphysio

---

OFFICIAL DIGITAL STUDY GUIDE VERIFICATION

Format: High-Yield Digital PDF | Standard Price: Rs. 49

Authorized License: Personal Single-User Academic License

STUDY GUIDE DETAILS & CONTENTS:

Comprehensive high-yield notes designed for Bachelor of Physiotherapy (BPT), MBBS, BDS, and allied healthcare students. Covers fundamental anatomy, clinical assessments, pathological conditions, evidence-based physical therapy rehabilitation protocols, and exam-oriented high-yield review.

KEY HIGHLIGHTS:

- Exam-Focused: Concise points curated from leading medical textbooks and clinical references.
- Visual Diagrams: High-yield diagrams and tables for quick revision.
- Mobile & Tablet Optimized: Readable on phones, tablets, iPads, and laptops.
- Official Medicos Minds Release: Verified by Dr. MD Kamran Alam.

INDEX

1. Introduction to Exercise Therapy
   - 1.1 Introduction to Exercise Therapy
   - 1.2 Muscle Work
   - 1.3 Aims
   - 1.4 Techniques of Exercise Therapy
   - 1.5 General Areas of its Application
   - 1.6 Group Action of Muscles
   - 1.7 Angle of Pull
   - 1.8 Mechanical Efficiency of Muscles
   - 1.9 Muscle Fibre Type
   - 1.10 Motor Unit
   - 1.11 Causes of Decreased Muscle Performance
   - 1.12 Causes of Immobility
2. Starting Positions & Movements
   - 2.1 Starting Positions – Standing, Kneeling, Sitting, Lying, Hanging
   - 2.2 Derived Positions
   - 2.3 Analysis of Joint Motion
   - 2.4 Muscle Work
   - 2.5 Neuro - Muscular Coordination
3. Free Exercise
   - 3.1 Classification
   - 3.2 Principles
   - 3.3 Techniques
   - 3.4 Indications
   - 3.5 Contraindications
   - 3.6 Effects and Uses
4. Movement
   - 4.1 Definition
   - 4.2 Classification – Active & Passive Movement
   - 4.3 Active Movement
     - 4.3.1 Definition
     - 4.3.2 Classification
     - 4.3.3 Principles
     - 4.3.4 Techniques
     - 4.3.5 Indications & Contraindications
     - 4.3.6 Effects and Uses
   - 4.4 Passive Movement
     - 4.4.1 Definition
     - 4.4.2 Classification
     - 4.4.3 Principles
     - 4.4.4 Indications & Contraindications
     - 4.4.5 Effects and Uses
5. Strength, Power, Work & Endurance
   - 5.1 Definition of Strength, Power & Work
   - 5.2 Endurance
   - 5.3 Muscle Actions
6. Physiology of Muscle Performance
   - 6.1 Structure of Skeletal Muscle
   - 6.2 Chemical & Mechanical Events During Contraction & Relaxation
   - 6.3 Physiologic Adaptation to Training
     - 6.3.1 Strength & Power
     - 6.3.2 Endurance
7. Open-Chain & Closed-Chain Exercise
8. Therapeutic Exercises
   - 8.1 Principles
   - 8.2 Classification
   - 8.3 Techniques
   - 8.4 Physiological & Therapeutic Effects
   - 8.5 Indications
   - 8.6 Contraindications
9. Joint Mobility
   - 9.1 Etiogenesis of Joint Stiffness
   - 9.2 General Techniques of Mobilization
   - 9.3 Effects, Indications, Contraindications & Precautions
10. Stretching
    - 10.1 Definition
    - 10.2 Tissue Response Towards Immobilization & Elongation
    - 10.3 Determinants of Stretching Exercises
    - 10.4 Effects of Stretching
    - 10.5 Inhibition & Relaxation Procedures
    - 10.6 Precautions & Contraindications
    - 10.7 Techniques of Stretching
11. CPM (Continuous Passive Movement)
12. Muscle Insufficiency
    - 12.1 Etiogenesis of Muscle Insufficiency (Strength, Tone, Power, Endurance & Volume)
13. Strengthening
    - 13.1 Definition
    - 13.2 Causes of Muscle Weakness / Muscle Insufficiency
    - 13.3 Principles of Strengthening
    - 13.4 Types / Methods of Strengthening Exercises
      - 13.4.1 Isometric Strengthening
      - 13.4.2 Dynamic Strengthening
        - 13.4.2.1 Concentric
        - 13.4.2.2 Eccentric
      - 13.4.3 Resisted Exercises
        - 13.4.3.1 Manual Resistance
        - 13.4.3.2 Mechanical Resistance
      - 13.4.4 Progressive Resistance Exercise (PRE)
      - 13.4.5 Types of Resistance
        - 13.4.5.1 Constant Resistance
        - 13.4.5.2 Variable Resistance
      - 13.4.6 Isokinetic Exercise
    - 13.5 Physiological Effects / Benefits
    - 13.6 Indications
    - 13.7 Contraindications & Precautions
14. Suspension Therapy
    - 14.1 Definition
    - 14.2 Principles
    - 14.3 Equipments & Accessories
    - 14.4 Indications & Contraindications
    - 14.5 Benefits of Suspension Therapy
    - 14.6 Types of Suspension Therapy
      - 14.6.1 Axial
      - 14.6.2 Vertical
      - 14.6.3 Pendulum
    - 14.7 Techniques for Upper Limb & Lower Limb
15. Functional Re- Education
    - 15.1 General Therapeutic Techniques to Re-educate ADL's Functions
    - 15.2 Lying to Sitting – Mat Activities
    - 15.3 Sitting Activities & Gait
    - 15.4 Lower Limb & Upper Limb Activities
16. Breathing Mechanism
    - 16.1 Review Normal Breathing
    - 16.2 Types
    - 16.3 Techniques
    - 16.4 Indications
    - 16.5 Contraindications
    - 16.6 Therapeutic Effects & Precautions
    - 16.7 Chest Expansion Measurement & Evaluation
    - 16.8 Postural Drainage
17. Neuromuscular In co-ordination
    - 17.1 Definition of Co-ordination & In-coordination
    - 17.2 Review of Normal Neuromuscular Coordination
    - 17.3 Etiogenesis of Neuromuscular In-cordination
    - 17.4 Test for Co-ordination – Equilibrium & Non-equilibrium Test
18. Frenkel Exercise
    - 18.1 Principles
    - 18.2 Uses
    - 18.3 Technique
    - 18.4 Progression & Home Exercise
    - 18.5 Advantages & Disadvantages
19. Group Exercises
    - 19.1 Organization of Group Exercises
    - 19.2 Recreational Activities & Sports
20. Hydrotherapy
    - 20.1 Definition
    - 20.2 Types
    - 20.3 Indication
    - 20.4 Contraindications
    - 20.5 Methods of Application
21. Whirl Pool Bath
    - 21.1 Construction
    - 21.2 Method of Application
    - 21.3 Therapeutic Uses
    - 21.4 Indications & Contraindications
22. Contrast Bath
    - 22.1 Method of Application
    - 22.2 Therapeutic Uses
    - 22.3 Indications & Contraindications
23. Posture
    - 23.1 Normal Posture – Active & Inactive Postures, Postural Mechanism
    - 23.2 Abnormal Posture – Assessment, Types, Etiogenesis
    - 23.3 Principles of Re-education, Corrective Methods & Techniques, Patient Re-education
24. Balance
    - 24.1 Definition & Physiology of Balance
    - 24.2 Components of Balance (Sensory, Musculoskeletal, Biomechanical)
    - 24.3 Causes of Impaired Balance
    - 24.4 Examination of Impaired Balance
    - 24.5 Static & Dynamic Balance Assessment & Management including Therapeutic Exercises
    - 24.6 Activities to Treat Impaired Balance – Mode, Posture, Movement, Precautions & Contraindications
    - 24.7 Types of Balance Retraining

14. SUSPENSION THERAPY

14.1 Definition :-

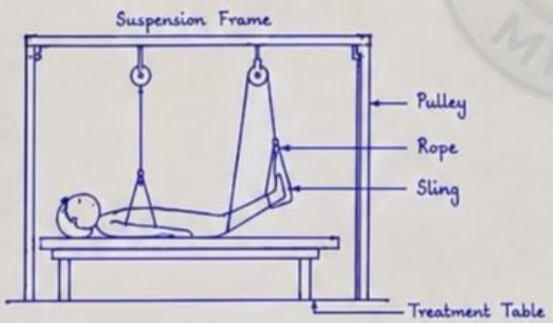

Suspension therapy is a method of treatment in which a part or the whole of the body is supported by slings, ropes, pulleys and cords from an overhead support so that traction is applied to relieve pain, reduce muscle spasm, relax tissues, decrease pressure on joints and facilitate movement.

14.2 Principles of Suspension Therapy :-

1. Traction – the body part is suspended to produce a pulling force.
2. Support – body weight is partially or completely supported by slings.
3. Decompression – reduces pressure on joints, intervertebral discs and soft tissues.
4. Relaxation – helps in relaxation of muscles and relief of spasm.
5. Alignment – maintains or improves alignment of the body part.
6. Individualization – treatment is adjusted according to patient's condition and tolerance.
7. Safety – proper equipment, height and knots are used to ensure safety.

14.3 Equipment and Accessories :-

- Suspension frame / Overhead suspension unit.
- Pulleys (single, double, universal).
- Ropes / Cords / Straps.
- Slings – canvas, webbing, leather.
- Hooks, carabiners and chains.
- Weights and sand bags.
- Stirrup, cuffs, harness.
- Treatment table / Couch.

14.4 Indications :-

1. Pain relief in acute and chronic conditions.
2. Muscle spasm and guarding.
3. Joint stiffness and contractures.
4. Low back pain, cervical spondylosis.
5. Disc prolapse (lumbar / cervical).
6. Post operative conditions (as advised).
7. Fractures and dislocations (for traction).
8. Neurological conditions – to facilitate relaxation and movement.

14.5 Contraindications :-

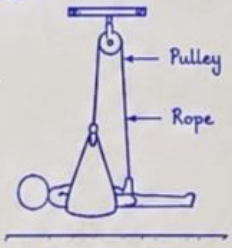

1. Unstable fractures.
2. Severe osteoporosis.
3. Acute inflammation or infection.
4. Severe cardiovascular or respiratory disease.
5. Malignancy.
6. Pregnancy (over abdomen).
7. Skin diseases or open wounds at contact areas.
8. Severe vertigo or uncontrolled hypertension.

14.6 Benefits of Suspension Therapy :-

1. Relieves pain and muscle spasm.
2. Reduces pressure on joints and intervertebral discs.
3. Promotes relaxation and rest.
4. Improves joint mobility and flexibility.
5. Improves circulation and reduces edema.
6. Facilitates early movement and rehabilitation.
7. Helps in maintaining proper alignment.
8. Improves functional ability and quality of life.

14.7 Types of Suspension Therapy :-

1. Simple Suspension
2. Balanced Suspension
3. Complex / Multi-point Suspension
4. Traction Suspension
   a. Cervical Traction
   b. Lumbar Traction
   c. Axial Traction
5. Partial Suspension
6. Total Body Suspension

Simple Suspension

14.8 Technique :-

A. Upper Limb Suspension

- Patient lies or sits comfortably.
- The arm is supported in a sling.
- Sling is attached to rope which passes over pulley.
- Required weight is applied if traction is needed.
- Position is maintained for prescribed time.

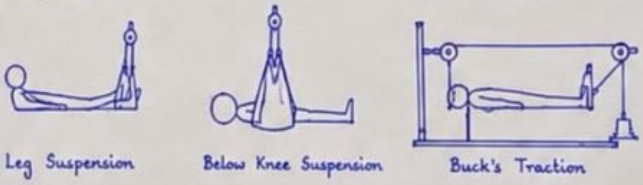

Diagram :-

Arm Sling | Shoulder Suspension | Elbow Traction

B. Lower Limb Suspension

- Patient lies supine.
- The limb is placed in a sling (below knee or foot).
- The sling is attached to rope over pulley.
- Weights are applied for traction if necessary.
- Maintain proper alignment and observe patient.

Diagram :-

Leg Suspension | Below Knee Suspension | Buck's Traction

THANK YOU FOR YOUR PURCHASE!

We wish you the very best in your medical and physiotherapy examinations.
